Technologies and Skills

Languages	JavaScript | TypeScript | Python | C++ | Java | Rust | Scala
Frameworks	React | CherryPy | Express | Django | Redux | Backbone | Node | Jest
Tools	GCP | Heroku | PostgreSQL | AWS | SQL | NoSQL | Git | Bash | HTML

Work Experience

Splunk | Software Engineer — San Francisco, CA | Aug 2023 – Present

- Led cross-functional modernization project for core page from Backbone.js to React for unified experience
- Documented and resolved several multi-year spanning critical customer-reported issues in the platform
- Automated security workflow for reporting third-party libraries and updating packages with vulnerabilities

Splunk | Software Engineer Intern — San Jose, CA | Sep 2022 – Dec 2022

- Migrated core web UI platform page from Backbone.js to React for improved accessibility & performance
- Improved team vulnerability response via Gitlab pipeline jobs for security scans & dependency updates
- Fixed accessibility bugs in the core web UI platform preventing users from navigating table creation

Uplift | Software Engineer Intern — Toronto, ON | Jan 2022 – Apr 2022

- Ported account & loan functionality of customer support (CSR) tools to new centralized React platform
- Maximized automated React & Chalice code coverage of CSR tools from 50% to 95% with Jest & Pytest
- Implemented new React landing page accessing AWS Cognito to streamline developer & CSR on-boarding
- Optimized React platform through Redux store workflow changes & parallel back-end API queries

Horizn | Web Developer Intern — Toronto, ON | May 2021 – Aug 2021

- Developed non-linear story progression functionality on React-based learning modules for optional content
- Built full-stack subscription feature to notify customers weekly regarding new course content
- Optimized accessibility of PHP Laravel & React platform used by international major banks

Projects

WZTourney CLOT — 2020 – Present

- Codeveloped open-source Django platform used by +1,800 players managing +60,000 games
- Built Discord integration of custom game updates used in +20 servers with +1,100 event subscriptions
- Designed and implemented Django testing framework to verify platform league lifecycle

Flock (HTN 2020++ Winner) — 2021

- Created a mobile React Native app to match friend groups with new movie suggestions
- Built JavaScript API back-end using Express with CockroachDB to store +6,800 movies
- Won the CockroachDB sponsor prize for best use of CockroachDB at Hack the North 2020++

Education

University of Waterloo | BSE Honours Software Engineering, Class of 2023 — GPA: 3.7 / 4.0
